

Welcome!

And thank you for considering Amphion for your facilities management, loss prevention and security products needs. We appreciate your interest and hope that the following information will better acquaint you with our products, services and business philosophy.

Amphion, headquartered in Ontario, California, is one of the nation's leading maintenance and facilities management companies with clients ranging from single businesses to national and worldwide chains. Numerous industries including retail, food service, video rental, specialty food, home furnishings and movie theaters trust Amphion to manage their security and maintenance, and Amphion delivers with one of the most comprehensive lists of products and services available.

Amphion was created to help your company succeed. We look forward to working with you and answering any questions you may have. Your security is our business, and we take our business very seriously. If you have any questions or concerns, please call us directly at (800) 520-2677.

Sincerely,

Scott Denton

Custom and Commercial Safes

Amphion manufactures, distributes, services and installs custom and commercial safes worldwide. Our safes are domestically manufactured in our Ontario, California facility, and we are proud to say our safes are 100% Made in America.

Amphion's manufacturing techniques provide for maximum durability while reducing lead-time and costs. Our state of the art designs increase security while eliminating the need for environmentally harmful metal body fillers common in this industry.

Whatever You Need — We Can Build It!

The Amphion coating process eliminates the need for aqueous washers and ovens, significantly reducing solid wastes and liquid hazardous wastes while yielding a durable, long lasting finish. Your safes are assembled and programmed after coating. All safes are serialized and 100% quality inspected twice before packaging, and our processes ensure the accountability of each inspector to each safe produced. Your completed safes are stocked in our warehouse for same-day shipment.

The Authenticator™

Introducing the Authenticator™, a state of the art counterfeit currency and credit card detection device that offers a low cost, highly effective weapon against a growing cause of lost income to restaurants and retailers. The Authenticator works with all new and existing U.S. treasury notes, credit cards, traveler's checks and driver's licenses.

Built to last, the Authenticator is made of steel with a durable black powder coated finish, dual bulbs and a grounded heavy duty power cord.

"...Because [ultra violet identifiers, security threads, water marks and color shifting ink] are difficult for counterfeiters to reproduce well, they often do not try. Counterfeiters are hoping that cash-handlers and the public will not check their money closely.

Currency counterfeiters are increasingly turning to digital methods, as advances in technology make digital counterfeiting of currency easier and cheaper. In 1995, for example, less than 1 percent of counterfeit notes detected in the U.S. were digitally produced. By 2002, that number had grown to nearly 40 percent, according to the U.S. Secret Service."

Quoted from a recent Department of Treasury press release

Digital CCTV Systems

Digital CCTV is the newest and possibly the most powerful loss prevention and management tool for mass retail and chain restaurants. Whether you need a single camera or a remotely monitored multi-camera system, Amphion's full line of quality products and installation/repair services provide a comprehensive CCTV solution custom designed for your business. Amphion is also a distributor of top-of-the-line CCTV systems from brand names such as Pelco and Dedicated Micros.

Amphion's digital CCTV system is a true network surveillance system. We offer a wide range of solutions for remote playback and monitoring while captured images or videos can be easily distributed to any remote location thru a LAN/WAN environment or any internet connection. The system's motion detector can be individually configured for each camera, and sensitivity and masking areas can be adjusted separately according to each camera's unique environment and characteristics for unsurpassed reliability and accuracy.

Amphion's PC based design provides our customers the freedom of creating the most flexible and cost-effective CCTV solutions. Our technology will never become obsolete because the software can be continuously upgraded according to our development.

Our digital CCTV system is a PC-based, multi-channel video surveillance system that utilizes the most advanced digital video compression technology to bring you the highest picture quality and video performance. Up to 16 cameras per DVR can be connected and viewed live on a local monitor screen or remotely thru a dial up or TCP/IP network. Video can be recorded based on specific schedules or motion detection. Events can be transmitted to a remote PC or burned on location to a CD-R and played back using Windows Media Player or our remote playback software.

We also offer national repair and maintenance service on all your existing CCTV systems.

The InstaKey Security System:

- Allows you to re-key up to 12 times* without removing cores or lock hardware.
- Tracks every serialized key online.
- Prevents unauthorized key duplication.
- Makes Key Management Simple and Cost Effective

The InstaKey® Security System is a unique system that lets you re-key your own locks by simply inserting and turning a key. There's nothing to disassemble, no one to call, and no tools required. A notched step change key is inserted into the cylinder and turned 180 degrees. Removing the key brings with it the disengaged wafer, rendering all previous keys in that series inoperable. All this is done while the key and lock remain in place in the door!

1. Step change key displaces wafer.

THE SECRET: A patented method of removing glued wafer stacks from multiple chambers of a lock cylinder - one wafer at a time.

2. Turning key disengages and captures wafer.

THE RE-KEYING PROCESS: Each computer generated keying series allows up to 12 re-keys* to be loaded into the cylinder distributed among grand, master, and pass key levels.

3. Returning key to original position leaves modified pin.

MULTIPLE LEVEL CHANGES: The removal of wafers from different stacks in multiple chambers allows the change of any level - grand, master, pass, even interchangeable core control keys - without affecting the operation or keying structure of any other level.

4. Extracting key removes wafer, rendering previous keys inoperative.

RE-PINNING: Once all wafers have been removed, the cylinder can be reloaded with a new and totally different series of changes. No new hardware - no lapse in security.

IT'S UNIQUE: Innovative technology. Some may even say it is revolutionary. But all users of InstaKey® can say "It really is that simple!".

INSTAKEY
Security System

*The number of re-keys varies depending on system.

Loss Prevention Consulting Services

An invaluable asset to any business who has been the victim of theft, Amphion Loss Prevention Consulting Services address everything including cash handling procedures, safe design, CCTV layout, guard service schedules and turn-over programs. In addition, this service also includes monthly news letters written by Amphion Director of Loss Prevention, Co-Owner and 33-year law enforcement and loss prevention veteran Mr. Mike Vaughn.

Amphion Interchangeable Core and Key Management Services

Ensure only authorized key holders have access to your locations! Amphion builds and manages a variety of cost effective systems that allow your staff to easily re-key locations at anytime without the need for an on-site technician.

For your low turnover locations we offer simple Interchangeable (I/C core) systems. We'll help you choose the best system for your applications. We will manage the systems and report only the information that is important to you. Systems can be mastered at any level and are compatible with all small format (Best®) I/C systems.

Quality Door Hardware

Amphion offers door hardware from brands including AlarmLock, Detex, Schlage, Arm-A-Dor and others as replacement hardware or for new store roll-outs. Amphion can custom-tailor your new construction hardware and have it delivered and/or installed on the day of your choice while existing hardware replacements can be shipped directly to our technician for installation as required.

Access Control System

Amphion has partnered with Videx to offer the ultimate Access Control System. Featuring CyberLock® and CyberKey®, this system sets a new standard in access control. Custom exceptions reports delivered via email notify you which locations opened late and closed early. You'll also be informed if unauthorized personnel try to open a door or safe. Also, one unique aspect of CyberLocks® is that they will retrofit into most existing lock hardware and require no wiring and no power source at the lock.

Amphion is one of the nation's leading maintenance and facilities management companies with clients ranging from single businesses to national and worldwide chains. Boasting one of the most comprehensive lists of products and services available, Amphion provides security and maintenance for numerous industries including retail, food service, entertainment, specialty food and home furnishings.

Amphion's national service and support division provides 24 hour, 7 day a week support for handyman service and field repair on safes, doors, locks, storefront and display case glass, roll up gates, alarm and panic bars, CCTV/VCR/DVR's, plumbing systems, electrical, and more.

True Technical Support

This is what separates Amphion from our competitors. We ask the right questions, listen to your management and fix the problem. Our trained and certified technicians are available to assist you 24 hours a day, 7 days a week. Our free and unlimited telephone support has proven time and again to eliminate unnecessary service calls and save you money.

Worldwide Technical Support 24 Hours and Day, 7 Days a Week

Amphion DATA Management System

This system allows us to track the service history and warranty of each piece of equipment at every chain location worldwide. In addition, the Amphion system enables clients to log on to our secure website to view the status of their orders, service requests and installations. Amphion can also provide a custom notification sequence that electronically notifies your staff and our management by phone, fax or e-mail any time a service is out of your pre-set parameters.

At Amphion, we are committed to solving problems in a timely and satisfactory manner, and our nationally set prices eliminate the possibility of hidden costs or inflated prices.
